LoRaWAN In India: Developments, Opportunities & More

According to reasonable estimates, the world will have close to **76 billion connected devices by the end of 2025**. Internet of Things (IoT) has already started to make its presence felt in diverse fields – affecting and improving the lives and operations of both general customers (*the random Joe-s*) as well as governmental bodies. While North America, Greater China and Europe are, expectedly, the runaway leaders – **India is moving ahead at a fast clip in this domain**. A recent report pegged the **annual IoT growth rate in India (for the 2017-2020 period) at ~41%** – well over the worldwide growth rate.

devices by the
diverse fields –
run away as well

Tata Communications bets big on growing partner ecosystem to drive enterprise growth

"With digital transformation, more enterprises are now looking at service providers that can offer cross-border connectivity and collaboration services, differentiated offerings as per markets and superior customer experience," he added.

NEW DELHI: [Tata Communications](#) is looking at growing its ecosystem of partnerships to drive growth for enterprise business within India and globally. Besides, these partnerships, the company is creating an open infrastructure, and platforms for businesses to help

enterprises stay competitive.

"We build strategic partnerships with other players that enable us to expand our portfolio, and access and deploy services faster. Our ecosystem of partnerships currently drives around 28% growth for our enterprise business," [Rahul Mathur](#), Vice President, Global Enterprise Strategy, Tata Communications, told ET.

Mathur said that the enterprise market is at a stage where most businesses are in the middle of digital transformation, and enterprises are constantly looking for service providers that can offer them flexible, scalable, super-high bandwidth and global connectivity.

"With digital transformation, more enterprises are now looking at service providers that can offer cross-border connectivity and collaboration services, differentiated offerings as per markets and superior customer experience," he added.

[Tata Communications recently partnered with Semtech to launch the first applications centre dedicated to LoRa Technology in Mumbai, India.](#)

The executive said that the Semtech partnership has helped the company reach out to enterprise customers to develop strong, LoRa-based PoCs for a wide range of IoT applications in India.

LoRa Test

Target customer

- 1. End node : (major)
 - Production: RF(TX & RX) parameters
 - RD: RF, demodulation, decode
 - Consuming current
- 2. Gateway :
 - End node parameters
 - Communication protocol

LoRa Test Solution

- RF parameters measurement, CSS demodulation and LoRa decoding
- Current consumption measurement

PC software

C-1200 LoRa Tester

- RF(TX & RX) parameters
- Demodulation/ decode
- Consuming current

PPH-1503, High precision DC Power Supply

- DC Power supply and current readback
- High DCI resolution: 0.1uA

GDM-9061, 6¹/₂ digits digital multimeter

- High DCI resolution: 0.1nA

NEW

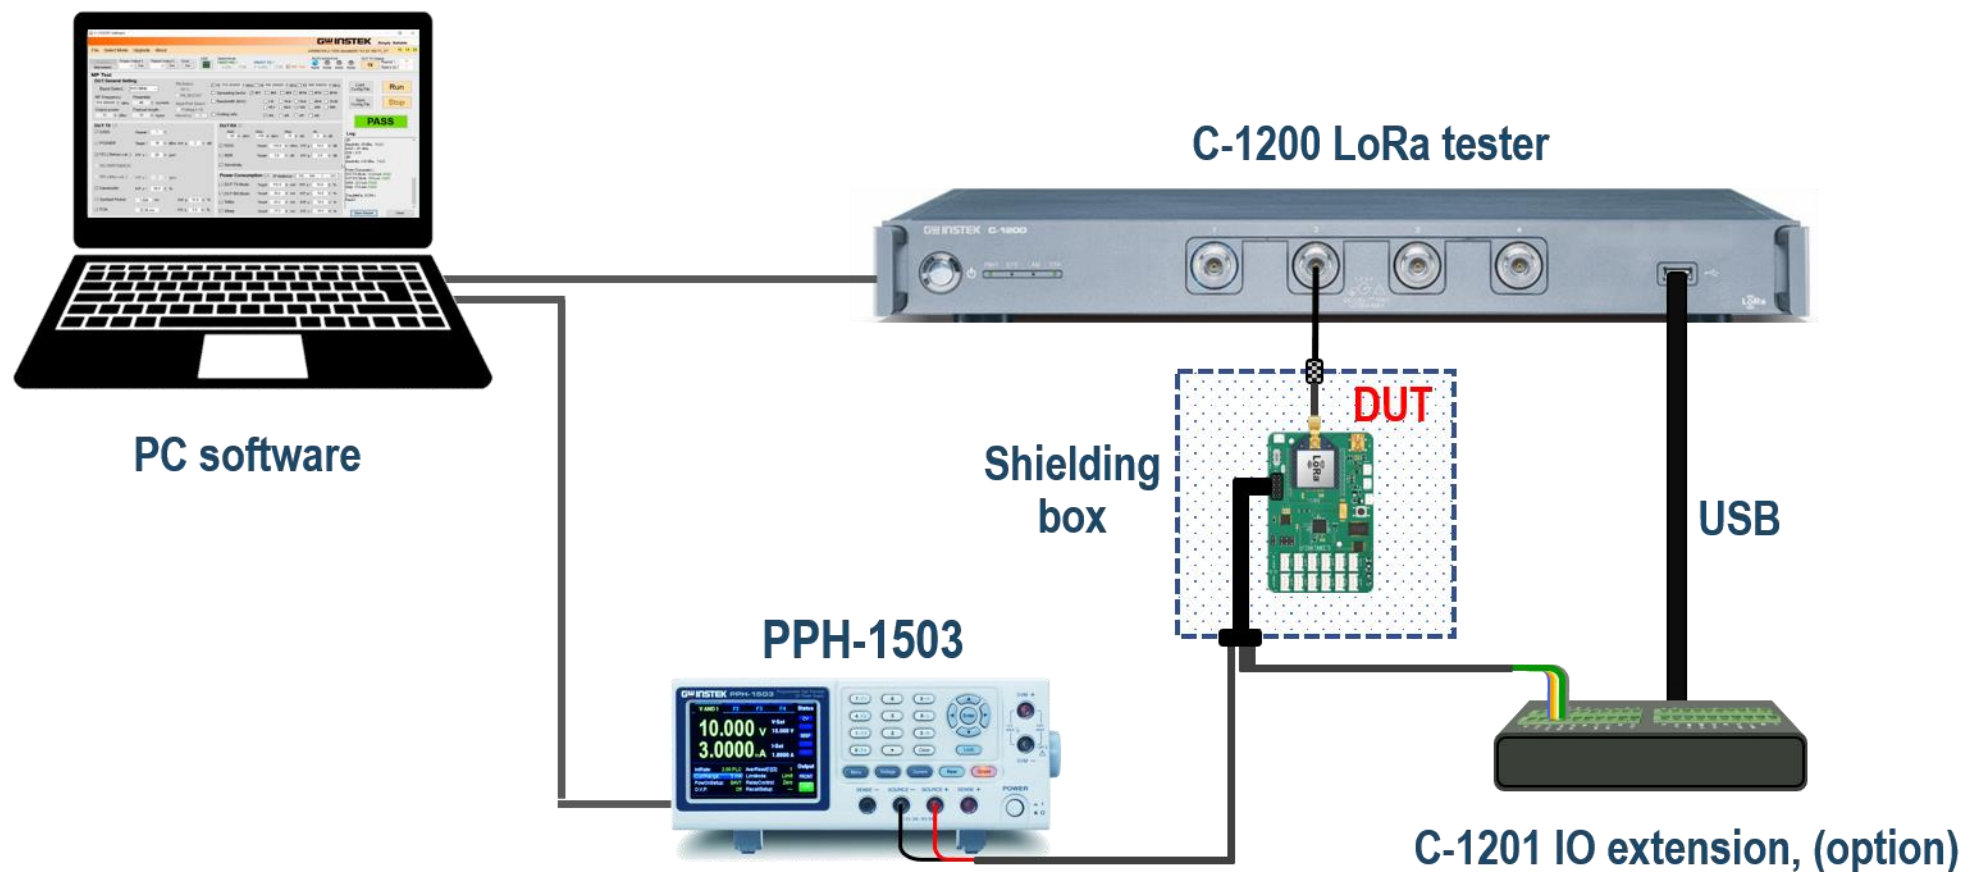

C-1200, LoRa Tester

- ✓ **Half-duplex** channel design allow to test DUT-RX and DUT-TX on every single channel.
- ✓ 1 Low Power TX Port and 3 RF TRX Ports are based on **switching type** and the polling time can be controlled.
- ✓ Support LoRa **Sub-GHz 2.4GHz** bands.
- ✓ Direct control interface by C-1200, includes **SPI**, **UART**, **I²C**.
- ✓ Remote Control by **LAN port**.
- ✓ Support 2 Trigger output ports, 1 Trigger input port.
- ✓ Providing External 10 MHz Reference Signal.

LoRa Test Solution

- RF parameters measurement, CSS demodulation and LoRa decoding
- Current consumption measurement
